Invent EMR – System Release log

1. Upcoming features and Products in 2018/early 2019

Seq.#	Product/Feature	Scenario	Description
01	**Invent EMR Mobile Application**	Can I instantly access my medical firm data anytime anywhere?	This is an exciting product we are excited to release after a year of extensive hard work! A mobile application will keep all doctors connected all the time to their medical firm data. Features include but not limited to: • View each doctor's appointment calendar in real-time • View dashboard and analytical graphs: how many appointments this year Vs. last year? Top paying patients? Top performing procedures …etc. • Create online appointment requests back to medical firm • Search for patients • Run critical reports • More!
02	**Built-in Bulk SMS Tool**	How can I send bulk SMS to all patients?	This utility will allow you reach all your patients in a click! • Filter bulk SMS by patient gender • Send to specific procedure patients • Send to specific doctor patients • More

03	**Waiting Area Application**	How can I control traffic of patients to/from reception desk ?	• This application will help you install a waiting area monitor/TV with medical waiting area system so patients will see when/who to see without referring to reception desk frequently • Patient confidentiality measures is taken into consideration • The application will also run videos or promotional offers on the side!
04	**New Ticketing System for support**	How can I keep track of my technical support cases with Invent?	This is a new helpdesk tracking system that will help medical clients easily post and keep track of technical support cases via mobile.

2. Major System Core Changes

Seq.#	Product/Feature	Scenario	Description
01	Security & audit trail enhancements	How can I track who deleted payments?	The audit trail functioning is improved to have a better look/picture of what actions are handled in the background by users. When deleting payments, the user is forced to enter notes + select a reason for deletion. Such actions are all logged in the built-in audit trail
02		How can I track who modified payments	When a payment date or amount is changed, the audit trail will track before/after entries and reflect them in audit trail logs for future referencing
03	Mandatory procedure sheets	How can I remind users to fill out a specific sheet before completing a procedure? or even a certain consent form sign off?	Mandatory (Prerequisites) medical sheet can be linked to procedures. For example, if we perform procedure X we must fill out the "vital signs medical sheet" or procedure Y cannot be completed unless the user confirms completing sheet-X or consent form Y for that specific procedure.
04	Double booking for same doctor at the same time.	How to completely prevent double-booking for patients under one specific doctor on the same time?	A prompt is added/thrown to users if patients are added under the same provider (doctor or assistant) at the same time in different operatory/room. This feature has to be enabled from security to take effect.

3. Misc. Other changes

Seq.#	Description
01	Daily emails enactments
02	Medical Sheets validation: validating input numbers and adding range for certain fields
03	Inventory module updates including adding two fields for each inventory item (Cost "Double", Supplier "Pick List").
